Digital Fine Art Services Information

BASIC FILM SCANNING

Scan file format is jpeg.
Tiff format available by request at \$3.00 extra.

Full roll scans include a archival cd. We can put multiple rolls on a single cd or dvd depending on file size. USB flashdrives are also available.

Our film scanners provide high quality, state-of-the-art professional scans at a reasonable cost.

Scans are color and density corrected. Simple dust and scratches are removed. Black and white film is scanned without dust and scratch removal. For b&w or for more serious dust and scratch issues please order extended service.

SCANNING : FLAT ART & PHOTOGRAPHS

About Our Scans: Our state-of-the-art scanners capture images with stunning accuracy and detail. We scan for personal and institutional archives, for retouching and restoration. We have experience with fire and water damaged originals.

Scan Specifications:
Art is scanned at 300 dpi at the size of the original art. Scans are 8-bit RGB jpegs by default. Tiffs are available. Ask about 16-bit scanning.

Order Pros scans, a higher resolution (bigger file size) when your goal is a print larger than your original.

Each *Art Repto Professional* digital capture includes one 5x7 proof on the paper you choose for your final prints. Additional proofs, if needed are \$15.00

Art Repto Basic scans are flatbed scans for originals sized up to 12 x 17. Proofs available at \$10.00 each.

Special note - metallic paints and reflective finishes may require additional corrections and labor charges

More About Our Materials & Techniques

Fine Art Digital Enlargements come in standard sizes; all kinds of crazy custom print sizes are readily available!

For framing you can add an extra border (up to 1") for a 10% additional cost.

If you are not sure how your image will look on paper we recommend you proof your work first, order a \$10 proof in advance.

MASTER FILE PREPARATION

We can prepare your digital files for you to print from, using all the amazing tools available in Photoshop, Lightroom and other applications.

Sizing, color balance, dust spotting are standard and other adjustments can be ordered for an extra charge, including raw conversion, profile conversion, file flattening, key wording, etc. Please ask for details.

Our technicians have many years of experience in retouching, digital file manipulation, organization and optimization.

Recommended Proofing Services

- if you are not sure how your image file will print on our papers we recommend a proof swatch
- Proofs are recommended for all print sizes up to 12x18; advisable for 16x16 to 24x36 and required for 30x40 and larger. Please provide a guide print when possible.
- Multiple proofs can be ordered to further customize your prints

Preparing your files for us to print

- 5 x 7 and smaller images require 7mb file size
- 8 x 10 requires approx 18 mb file size
- 11 x 14 up to 13 x 19 requires a 32 mb file
- 16 x 20 to 40 x 60 requires 60 to 200 mb file

Files should be sized at 300 dpi ideally. Lower dpi can also work. If you are not sure, please check with us before sending a lower res file. Also use 8 Bit, RGB, flattened files in jpeg or tiff with color profile of your choice. Please use standard file names and up to date profiles. Missing profiles may yield sub par results.

Not sure about what profile to use? We suggest you start with industry standard sRGB.

DISPLAY PRINTING & MOUNTING

We also create large display graphics and mounting:

- Gator and foam core mounting
- Laminated MDF mounting, see our in store display
- Outdoor signage
- Ultra large photographic displays
- Trade show display graphics
- Backlit film prints

Services include consultation, design services, file preparation, display printing, lamination, adhesive application, mounting on a large variety of materials plus shipping and installation.

We'd be happy to discuss your project and provide a quote. Please call us.
